How to – Change Wi-Fi Network during the Autopilot build Process

GSK

Speed read.

You have received the computer from OEM'S (HP/Lenovo) direct ship from their factory and building a Windows 11 Autopilot during the process of setup if there is a disconnect in N/W or wanted to switch then this document is for you.

What do I need to know?

To View your PC Network, you may have:

- Unboxed and powered on the devices for the Autopilot build and user is authenticated and chosen the available network and connected as well from the list but if you have a need to change the network due to poor connection or Power cut situation etc...
- Tech - How to first login to the autopilot build (service-now.com), you would be already following the document for the initial setup

What action do I need to take?

Currently GSK users are using largely two OEM devices for the Windows.

If your device is a HP then for changing the network during the Autopilot build process.

Shift + F10 to load the command prompt, then type "**start Ms-settings:**"

If your device is a Lenovo then for changing the network during the Autopilot build process.

Shift+Fn+F10 to load the command prompt, then type " **start Ms-settings:**"

Then you will be shown the system settings please navigate to the Wi-Fi with the help of GSK Tube Video
